

Usman Umar

Nigeria | Remote | Available for Global AI Projects | +234 913 882 6727 | uteach38@gmail.com | <https://mrcoder.lstack.co>

SUMMARY

Software Engineer and AI-focused technical professional with strong experience in software development, AI-assisted development, technical analysis, debugging, structured problem solving, and quality evaluation. Skilled in AI data annotation, LLM response evaluation, coding evaluation, data quality assurance, content classification, rubric-based assessment, and human feedback.

Strong ability to understand complex instructions, evaluate AI-generated content and code, identify factual and logical errors, detect edge cases, compare alternative outputs, and provide clear, objective, evidence-based feedback. Combines technical software-engineering knowledge with analytical reasoning, attention to detail, consistency, and the ability to work independently on remote, project-based assignments.

Interested in AI training, data annotation, LLM evaluation, AI coding evaluation, software engineering evaluation, technical content review, data quality, and human-in-the-loop AI projects.

EDUCATION

Nigeria

Advanced Diploma in Informatics

Cybersecurity Studies & Technical Training

EXPERIENCE

Full-Stack Software Engineer & AI-Assisted Developer

2023–Present

Independent / Remote

Nigeria

- Develop, test, debug, and maintain web and mobile applications using modern programming languages, frameworks, databases, APIs, and development tools.
- Analyze complex technical requirements and translate specifications into accurate and functional software implementations.
- Evaluate AI-generated code and technical outputs for correctness, completeness, logical consistency, security, efficiency, and adherence to requirements.
- Identify programming errors, incorrect assumptions, incomplete solutions, hallucinated technical claims, inconsistencies, and edge cases.
- Compare alternative technical solutions and assess their suitability against defined requirements and expected outcomes.
- Use AI-assisted development workflows for research, code generation, debugging, testing, refactoring, documentation, and technical problem solving.
- Systematically investigate discrepancies between expected and actual software behavior.
- Perform detailed quality checks before delivering technical implementations.
- Work independently across multiple technical assignments while maintaining consistency, accuracy, and attention to detail.
- Rapidly learn unfamiliar technologies, project requirements, evaluation criteria, and structured workflows.

TECHNICAL SKILLS

AI Data Annotation & Labeling

LLM Response Evaluation

AI Output Evaluation

AI Training Data
Human Feedback
Preference Ranking
Rubric-Based Evaluation
Data Quality Assurance
Content Classification
Text Classification
Error Detection
Hallucination Detection
Factuality Assessment
Relevance & Completeness Assessment
Instruction-Following Evaluation
Edge-Case Identification
Prompt Analysis
Structured Data Review
Quality Control
Annotation Guideline Compliance
AI-Generated Code Evaluation
Code Review
Programming Problem Evaluation
Technical Response Evaluation
Code Correctness Analysis
Logical Error Detection
Bug Identification
Security & Reliability Review
Algorithm & Implementation Analysis
Requirements Compliance
Technical Reasoning
Debugging & Troubleshooting
Software Testing
API & Backend Evaluation
Database Logic Evaluation
Programming: Python, JavaScript, PHP, Dart, SQL
Frameworks: Laravel, React, Next.js, Flutter
Backend & APIs: REST APIs, Authentication, Business Logic, API Integration
Databases: MySQL, SQLite
Development Tools: Git, GitHub, AI Coding Assistants, Debugging & Testing Tools
Software Engineering: Requirements Analysis, Code Review, Testing, Debugging, System Design, Technical Documentation

AI EVALUATION CAPABILITIES

LLM & AI Response Evaluation: Evaluate AI-generated responses based on Accuracy, Relevance, Completeness, Clarity, Reasoning, Instruction Following, Factuality, Consistency, Safety, Overall Quality. Able to identify unsupported claims, missing information, contradictions, reasoning errors, and responses that fail to satisfy the original instruction.

Data Annotation & Classification: Experienced in structured information handling and capable of applying detailed project-specific guidelines to classify, label, review, and validate information. Able to maintain consistent decisions across large datasets while identifying ambiguous, incomplete, inconsistent, or low-quality records.

AI Coding Evaluation: Strong programming background enables evaluation of AI-generated solutions for Correctness, Logic, Functionality, Requirements Compliance, Security, Efficiency, Maintainability, Edge Cases. Able to explain why a technical solution succeeds or fails and provide clear, actionable feedback.

Quality Assurance: Strong attention to detail with a systematic approach to identifying defects, inconsistencies, incorrect outputs, and deviations from defined criteria. Comfortable working with repetitive, precision-focused tasks while maintaining consistent quality.

PROFESSIONAL STRENGTHS

Analytical Reasoning · Critical Thinking · Attention to Detail · Problem Solving · Technical Judgment · Instruction Following · Quality Control · Research · Written Communication · Fast Learning · Consistency · Independent Remote Work

LANGUAGES

English: Professional Working Proficiency

AVAILABILITY

Remote | Contract | Project-Based | Part-Time | Global AI Projects

Available for AI data annotation, LLM evaluation, AI training, coding evaluation, software engineering evaluation, technical review, data quality, and human-feedback projects.
